

Twisting Ring

The 360 Degree Movement Harness by Climbing Sutra

Climbing Sutra’s Twisting Ring allows performers to twist and rotate in any direction. With two axes offering 360 degrees of rotation the possibilities are endless. Constructed of aircraft quality aluminum for the inner and outer rings with stainless steel components, Climbing Sutra’s Twisting Ring is tough, durable and built to last. The inner ring glides effortlessly within the outer ring on sealed stainless steel bearings for twisting left and right. While the precision engineered end swivels provide head over heels (somersault) rotation. Designed and engineered for two and four wire automated flying, the Twisting Ring can also be used with “tuning forks” and robotic motion arms.
